Notice of Proposed No Further Action related to petroleum hydrocarbon discharge.
Comment Period Ends May 14, 2003

Problem Description: Petroleum hydrocarbons as gasoline were detected in soil at up to 260 parts per million beneath an approximate 300-gallon underground storage tank. The former tank was located in the alley adjacent and west of the garage at 818 Nason Street. The soil was temporarily placed back into the excavation pending further investigation. Groundwater is located approximately 12 feet below ground surface.

Interim Actions Completed: Five soil borings were drilled surrounding the former tank location to investigate the extent of contamination and the potential impact to groundwater. No detectable levels of contamination were reported in soil and groundwater samples. The soil placed back into the hole at the time of tank removal was re-excavated and disposed of properly. The analytical results of soil samples collected from the excavation verified the complete removal of petroleum hydrocarbon impacted soil.

MtBE Status: Soil and groundwater samples were analyzed for gasoline additives including MtBE and no detectable levels were reported.

Proposed Action: Upon review of the facts, Regional Water Board staff has proposed no further action.

Case Closure with no further action will be completed without further notice unless significant public comment is received prior to May 14, 2003. You may contact Joan Fleck at flecj@rb1.swrcb.ca.gov or (707) 576-2675.
